EDUCATION

Rutgers University, New Brunswick – B.S. in Computer Science, Minor in Business Administration Jun '22 – May '24
Middlesex County College – A.S. in Computer Science Sept '19 – May '22

TECHNICAL SKILLS

• Java • Python • C • C++ • Typescript • Javascript • Node.js • AWS • GCP • Azure • MySQL • PostgreSQL • REST • MongoDB • Docker • Kubernetes • Agile Development • Git • CI/CD • Jenkins • Terraform • Ansible • Linux • Windows

WORK EXPERIENCE

R&D Altanova, Advantest Group's South Plainfield, NJ
Technology Specialist, developing Jun '24 - Present

- Built custom NetSuite integrations using RESTlet and SuiteScript with OAuth streamlined data retrieval for external systems
- Developed a real-time automation system for production planning, tracking sales orders, work orders, GL impacts, transactions, and invoices to enhance reporting and planning
- Automated a PCB board thickness measurement by REST API development & IP/TCP communication with a robotic arm.
- Introduced and implemented CI/CD processes, automating builds, testing, and deployments to enhance development efficiency and code quality

R&D Altanova, Advantest Group's South Plainfield, NJ
Information Technology Intern Aug '22 - May '24

- Managed Microsoft Azure admin tasks, emails configurations, Intune deployments, and user authentication
- Contributed to technical documentation, ensuring clear descriptions of system processes and troubleshooting steps
- Led the asset management tracking system streamlining inventory, assets, audits, and backups with a 1200+ records globally
- Innovated dashboards with real time analytics tracking 10000+ operations across 25 departments improving production efficiency
- Configured switches, servers, VMs and databases with user permissions, access control and security configurations

PROJECTS

Scam Email Detection Model – Python, NPL, Pytorch, TensorFlow Jun' 24 - Present
Self-Learning Project

- Trained a Scam Email Detection Model on a Kaggle dataset of over 100,000 emails, classifying content as 'scam' or 'real'
- Utilized PyTorch and advanced NLP techniques to optimize model performance and reduce false positives
- Implemented feature extraction methods like TF-IDF and word embeddings for improved classification accuracy upto 63%

Wes AI Chatbot – Python, transformers, Django, html, CSS, JS Mar' 24
Rutgers University Hackathon HACKRU Spring 2024

- Interactive AI Chatbot implemented using sentence transformer, majorly trained on Rutgers bus routes, courses, and services
- Deployed applications on Vercel and managed projects using GitHub for version control and collaboration

File System (FUSE) – C, Makefile, Benchmark, Report Analysis Nov '23 – Dec'23
CSC-416 Operating Systems

- Developed a custom file system in C using FUSE, writing over 1,700 lines of code to implement core file operations like file creation, reading, and directory management
- Optimized inode allocation and block indexing, improving I/O efficiency for large data sets
- Implemented indirect pointers and directory removal, enhancing file system functionality, and passing all benchmark tests

Tripmate Notifier – Java, JavaFX, API Oct '23
Rutgers University Hackathon HACKRU Fall 2023 – 1st NJ Transit Winner

- Innovated the Nj Transit mobile application by integrating widget feature for real time trip alerts and barcode for payments
- Leveraged NJ Transit datasets to analyze and extract meaningful trip information, utilizing data cleaning techniques to enhance the accuracy and relevance of trip notifications.

CERTIFICATIONS

• CISCO Ethical hacker • CyberOps Associate • Junior Cyber Analyst • Manage Kubernetes in Google Cloud
